

***MIDWIFERY CARE OF MRS “WF” AGE 28 YEARS OLD MULTIGRAVIDA
FROM III TRIMESTER PREGNANCY TO 42 DAYS OF POSTPARTUM***

Founding Case in Mr. “YT” Family’s Working Area of Community

Health Centers 1 North Kuta

ABSTRACT

Continuity of care is a process whereby cooperative healthy workers engage in continuous healthy service management towards high-quality services and cost effective medical care. It aims to monitor and detect any possible complications that accompany mother and baby start from pregnancy to childbirth. Health workers who are authorized to provide midwifery care, and that is midwife. This Final Report aims to determine the midwifery care provided to the mother starting from 39 weeks of gestation two day until the end of the postpartum. The method used in the Final Report is to use a comprehensive approach and documentation. Maternal obstetric care results are normal, not accompanying complications were found. The results of maternal care are normal. Postpartum care results are normal. The results of midwifery care in infants from birth to 42 days are normal. Conclusions on the results of care given to mothers from the third trimester of pregnancy to 42 days of postpartum took place physiologically, mothers and healthy babies.
