KONTRIBUSI INISIASI MENYUSU DINI (IMD) TERHADAP BERAT BADAN BAYI PA MNEOUMARI MN PKEAS 4 DENPASAR SELATAN Ni Made Asri Arsini¹, Ni Wayan Armini², Ni Gusti Kompiang Sriasih³ Abstract. The rate of breastfeeding in Denpasar is low and the nutritional state in Bali is poor, tmak hegoventlhs heIMD Psets udywas o determine the contribution of early breastfeeding initiation towards infants body weight on neonatal age of 14 day with a 95 % confidence level the sample was 23 people with consecutive sampling.

The method used was analitic observational. The results of person corrlation the r value is 0,474 means IMD with infants body weight have moderate levels of relationship with the direction of a positive correlation. Based on simple linear regression, showed the IMD contribution to infant weight at 14 days neonatal age was 22,4 %.

This suggests is health professionals should continue to provide encouragement and information trough antenatal classes and counseling. The knowledge possessed by the mother from the beginn
