Abstract. Dental and oral disease can become a risk factor of other disease, such as the focal infection of tonsilitis, othis media, bacteremia, tocksemia, systemic disease like diabetes mellitus, and can also manifest with the oral cavity. Diabetes mellitus has a very close relationship with abnormality in periodonal tissue in which DM patients who has poorcontrol over oral hygiene and high sugar level is a good medium for the development of bacteria in the oral cavity. Inverfece, the researches is interested to shady this with the objective of knowing the relationship between the risk factor tage and gender) and the condition of periodonal tissue of DM patients.
This study used cross sectional study by analyzing secondary data of the condition of periodonal tissue of DM patients, which was combacted in RSUD Gimyu in June 2014. The funding shows that there is a relationship between age and periodonal obnormality in value of 0.198 (p. 50.05).
The conclusion is that there is a relationship between age and periodonal abnormality in DM patients. DM patients. DM patients are recomended to visit dental clinics to consult and aget dental or oral care.

Key Word : Diabetes Melitus, Kelainan Jaringan Periodontal
