Jumlah dan Besaran Sampel

Peneliti menetapkan nilai r (korelasi yang dianggap bermakna sebesar 0,5), kesalahan tipe I sebesar 5% untuk hipotesis dua arah (1,96), sedangkan kesalahan tipe II sebesar 20% yaitu 0,842 . Sehingga penghitungan besar sampel sebagai berikut

$$n = \left[\frac{Z\alpha+Z\beta}{0,5 \ln(1+r)/(1-r)} \right]^2 + 3$$

$$n = \left[\frac{1,96+0,842}{0,5 \ln(1+0,5)/(1-0,5)} \right]^2 + 3$$

$$n = \frac{7,851}{0,3017} + 3$$

$$n = 26,167 + 3$$

$$n = 29,167$$

$$n = 30$$

Penelitian ini menggunakan teknik sampling *non probability sampling* yaitu *consecutive sampling* artinya sampel yang diambil adalah semua ibu hamil yang memenuhi kriteria inklusi akan direkrut sampai dengan besar sampel terpenuhi.
