FROM GESTASIONAL AGE 38 WEEKS 1 DAYS UNTIL 42 DAYS
POSTPARTUM**

*Midwifery care held in the work area Puskesmas Kediri I
2018*

ABSTRACT

Pregnancy, labor, and postpartum is a nature of natural processes in the life cycle of women to be lived. In order to avoid pathological conditions it is necessary to have a comprehensive and continuous monitoring conducted by health personnel one of which is the midwife. This care is aimed at knowing the results of midwifery care implementation at Mrs. “RU” 24 years old multigravid along with her baby who received comprehensive and ongoing midwifery care from 38 weeks 1 days until 42 days postpartum. Methods used is interview, examination and documentation of care results. During pregnancy the well-being of the fetus is characterized by a strong and regular fetal heart rate, maternal well-being is characterized by examination of vital sign of laboratory examination within normal limits. Labor were normal when the gestasional age 39 weeks 2 days. Involution process, expending lochea and lactation on postpartum were normal. Baby was cry immediately on born and active motion with birth weight was 3.900 grams. The baby weight according to the neonatal period into 4.900 gram. The results of the management of midwifery care showed that the process of pregnancy, labor, and postpartum was physiology. As well as the state of healthy baby.
